

Einladung zum Vortrag

eVTOL – The Promise of Large-scale, On-demand Urban Air Mobility

Diana Siegel
Program Manager, Aurora Swiss Aerospace

Der Vortrag wird in deutscher Sprache gehalten

Datum: Donnerstag, 26. April 2018

Zeit: 17.30 Uhr

Ort: ETH Zürich, Maschinenlabor Hörsaal ML H 44 (Maschinenlabor)

eVTOL aircraft promise an entirely new form of urban mobility by taking transportation to the air. Flying instead of travelling on the ground is not a new idea. However, it took the convergence of several technologies to bring this idea within reach: high-performance electric powertrains, vehicle autonomy and ubiquitous connectivity. While the technology has come a long way as demonstrated by many successful sub-scale and even full-scale prototypes being flown, challenges remain. In order to be successful as a commercial product, eVTOLs need to become sufficiently safe to carry humans in regular operation over populated areas, reliable enough to operate at high utilization and cost-efficient enough to close the business case for future operators. This talk will examine the current state of the art of vehicle technology and readiness of the wider ecosystem as well as identifying areas requiring further research and development.

Wir freuen uns auf Ihre Teilnahme. Gäste sind herzlich willkommen.

Mit freundlichen Grüßen
Dr. Jürg Wildi, Präsident

Unsere nächste Veranstaltung:

**Mittwoch, 23. Mai 2018: Generalversammlung
bei der REGA, Zürich**
