Abstract

How can AI expertise serve the aviation of tomorrow?

Our vision is to integrate AI into critical systems in order to make the aircraft of tomorrow independent. Autonomy will come through the ability to understand the context, we talk about information superiority but also by the ability to make decisions, we talk about decisional autonomy. Equipment equipped with these abilities will learn to react to the different situations it faces. This increase in equipment by cognitive functions makes it possible to design reasoning adapted to the context in order to be able to make the right decisions.

Three market segments are particularly relevant: civil aviation, future combat and drones.

Wir freuen uns auf Ihre Teilnahme. Gäste sind herzlich willkommen.

Mit freundlichen Grüßen
Dr. Jürg Wildi, Präsident
