The legacy F/A-18 Hornet was designed for aircraft carrier duty and was the first tactical aircraft designed to carry out both air-to-air and air-to-ground missions, the first aircraft to have carbon fiber wings and the first tactical jet fighter to use digital fly-by-wire flight controls.

Today, Boeing is taking the F/A-18 Hornet to the next level with the F/A-18 Block III Super Hornet. The Block III is the latest generation of the proven platform, and includes numerous upgrades that make it one of the most capable fighter jets in the world.

It is not only proven and cost-effective, but it is also capable of accomplishing missions even in the harshest of environments. As an F/A-18 Hornet operator, the ease of transition to the next-generation of fighter capability makes the Block III a great choice for Switzerland.

Wir freuen uns auf Ihre Teilnahme. Gäste sind herzlich willkommen.

Mit freundlichen Grüßen
Dr. Jürg Wildi, Präsident
