Airbus A400M – Flight testing a modern tactical and strategic airlifter

Simon NICASTRO
Head of A400M Test Programme
Flight & Integration Test Centre
Airbus Defence and Space, Sevilla/SP

Jon TAYLOR
A400M Project Test Pilot
Flight Operations Centre
Airbus Defence and Space, Sevilla/SP

Datum: 22. April 2021

Zeit: 17.15 Uhr

Ort: online, <https://airbusds-schweiz.widecast.de>

The Airbus A400M is the most advanced proven and certified airlifter available. A truly European product that combines 21st century state-of-the-art technologies to fulfill current and upcoming needs for an airlifter. The A400M combines the capability to carry strategic loads with the ability to deliver even into tactical locations with small and unprepared airstrips. The aircraft can also be used as a platform for air-to-air refueling and for special missions like medical evacuation and humanitarian assistance.

The aircraft provides excellent performance with its high-maneuverability, its low-level flight capability and short take-off and landing performance - all combined with an impressive payload performance. As Jon Taylor, one of our presenters, points out, "It's special. Around 140 tons worth of aircraft and yet it flies and has an agility as there it was more a small fast jet aircraft."

Simon Nicastro and Jon Taylor from Airbus Defence and Space will provide great insights not only into the A400M, but also into the business of flight testing of highly advanced aircraft.

Um am Live-Stream teilnehmen zu können, nutzen Sie bitte den o.a. Link. Eine vorherige Anmeldung ist nicht notwendig, ebenso ist die Installation von spezieller Software nicht erforderlich. Fragen zum Vortrag können Sie im Live-Stream per Chat-Funktion schriftlich stellen. Der Link wird am Tag der Veranstaltung online geschaltet.

Wir freuen uns auf Ihre Teilnahme. Gäste sind herzlich willkommen.

Mit freundlichen Grüßen
Dr. Jürg Wildi, Präsident
