The Future of Counter-Drone Technology in Switzerland

Prof. Roland Siegwart, Full Professor at **ETH Zurich**

Marcel Kägi, Deputy Director General at **FOCA**

Kai Holtmann, Managing Director of Drones Taskforce at **Armasuisse**

Louis Saillans, Co-Founder at **Askalon Technologies**

David Shapira, Co-Founder at **CDDS**

Date: 13.10.2026 (Tuesday)

Time: 18:00 c.t.

Location: ETH Zurich, LEE E 101 (Leonhardstrasse 21, 8092 Zurich)

Drones are spreading into every corner of industry, public service - and the military domain. Drone warfare is now the key component of both defence and offence on the frontlines in Ukraine... and low-cost drones are the perfect vehicles for hybrid warfare: [On 5 August 2026](#), drones carrying explosives attacked Leipzig Airport, nearly hitting a Ukrainian Antonov cargo aircraft and striking a DHL aircraft in flight.

Switzerland is now answering at scale: Innosuisse and armasuisse have launched a Flagship initiative to fund research on “Resilient and Secure Technologies for Defence and Mobility”, with Counter-UAS named as one of three strategic technology areas.

During this lecture, five senior experts from research, government and industry will discuss the latest technological developments in anti-drone technologies and whether Switzerland can field a layered defence before the next incident is over Swiss airspace.

We look forward to welcoming you to this event. Guests are most welcome!

Best regards,

Dr. Michael Weinold for the Academic Aviation Club Zurich

Dr. Jürg Wildi for the Swiss Association of Aeronautical Sciences
